January 2026 CSE 216
Online on Advanced SQL
Subsection: B1+B2
Time: 55 minutes + 5 minutes submission
Marks: 4*5 = 20

(1) For each region, display the region name and the total number of departments located within that region. Include regions that have no departments. Display only region_name and department_count, sorted by region_name in ascending order.

(2) Find all employees whose job's maximum salary is higher than the average maximum salary of all jobs, and who work in departments having at least 6 employees. Display the employee ID, full name, salary, job title, and department name.

(3) For each country, find the department having the highest number of employees among all departments situated in that country. Print country name, department name, and total number of employees working in the department. Do not use sub-query in the WHERE clause. Use sub-query in FROM clause. Assume that there is one and only one such department for every country.

(4) Find all employees whose salary is greater than the average salary for their specific job_id, **EXCLUDING** (MINUS) any employees who work in the 'Sales' department.

Return the following columns:

- EMPLOYEE_ID
- FULL_NAME
- JOB_TITLE
- SALARY
- PAY_TYPE: A CASE statement returning 'Commission Eligible' if commission_pct is not null, otherwise 'Base Salary Only'.
- Order by SALARY descending.
